

Monthly April 5, 2022

Attendance: Gabriel, Monika, Matt, Flavius , Andrea,Radu, Anja, Lucas, Ajmer,Nicu, Iacob, Luci,Ajmer,Mario,

Andrea is away at the UBC Spray Finishing course. They finally have in person courses again. Some job sites have picked up and Radu has been able to do the final measurements. This means we can manufacture and store the cabinets. Monika to look into renting a Seacan for storage. Maybe even buying one if this keeps going on. That way we can keep building cabinets and not stop the production. Some cabinet-shops were saying they charge the owners storage fees. Better than closing the shop and then incurring overtime to catch up. Edgebander is down again. Nicu to order parts . The tech will come in April 12 at 8 AM. Nicu stay with him and try to learn as much as possible.

Ajmer is making a few deliveries. Monika to put him on the ICBC insurance. Please send your DL to Monika . Also please remember to ALWAYS park the van inside at night. In October we had a break in , the stole the catalyst and caused a \$14,000 damage.

There were a few screws in the parking lot and Radu had a flat tire. Please keep a look-out for these screws and pick up to avoid a flat.

Monika has blocked off tickets to see Cirque du Soleil for the whole team on May 13, please let her know if you can/cannot make it and whom you will be bringing. You can bring the whole family (souse ,kids and grandparents)

Also May 6, 2022 the students of GW Graham secondary school in Chilliwack are coming for a field trip. The goal is to get them exposed to our industry, and maybe they want to join us. Remember that's how we got Shamus? They will watch you perform your job. Encourage them to ask questions and engage them. NOT at the table saw but the CNC, sanding, finishing, cabinetuilding, drawers etc. Their shop teacher is supervising them so feel free to teach them a few things.

Major clean-up to be done the day before. This means, no loose items, no cords on the floor, no dust (Mario when using the router please use the vacuum provided specifically for it),ducts need to be dusted , no dust around the machineries...a photographer is coming as well as their blogger so we must be in tip top shape.

Next safety meeting May 11,2022
