

Battery Care Guide for Conventional Charge Applications

Ensure the battery is only plugged in once per day, with enough time allowed to fully charge the battery

Make sure the battery is charged at least once per week regardless of the state-of-charge

The top of the battery must stay clean, and free of corrosion. Please call us for neutralizing spray or PM programs if needed

When charging, keep the battery hood open (if applicable) to improve ventilation and cooling

Never disconnect the battery from the charger without turning off the charger first

Ensure the charger is plugged into the battery NOT the forklift when charging

Make sure all batteries receive an equalize charge every 5th cycle or 2 weeks - whichever occurs first

Always check water levels after an equalize charge, and top off as needed.
ONLY WATER THE BATTERY WHEN IT IS FULLY CHARGED
